AEGIS CYBER-FORENSICS LABORATORY

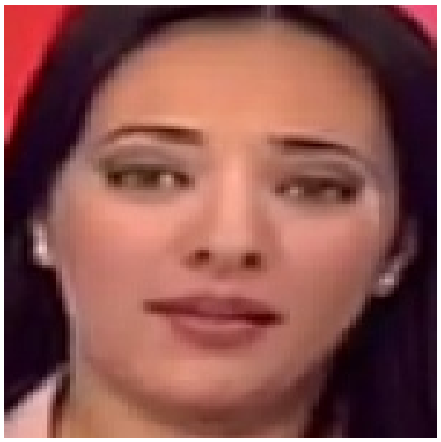

DIGITAL MEDIA AUTHENTICATION & DEEPFAKE INVESTIGATION DOSSIER

Case Reference:	AEGIS-DF-00010	**Date of Analysis:**	2026-09-22 21:31:54
Investigator/User:	System Forensic Analyst	**Media Type:**	IMAGE
Original Filename:	0050.png	**Face Detected:**	Yes (Primary ROI isolated)
SHA-256 Hash:	`50256c29e58b3f701f14a3116e244dfcdf9dda3278378aa3dcfbf4b0fe941366`		

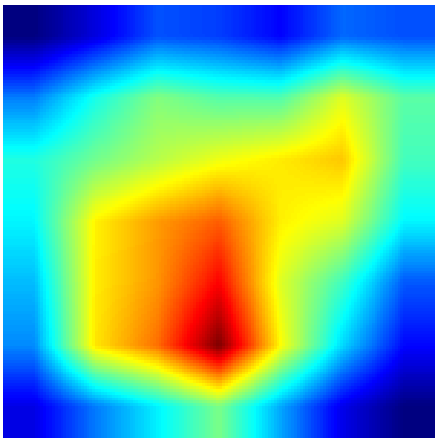

FORENSIC VERDICT: DEEPFAKE DETECTED

Confidence Level: **99.8%** | Fake Probability: **99.8%** | Real Probability: **0.2%**

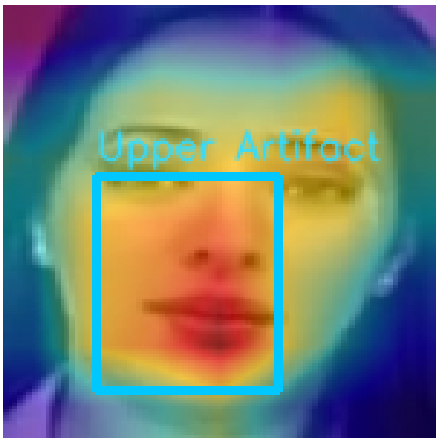

Visual Evidence & Explainable AI (Grad-CAM) Activation Maps

Isolated Facial ROI

Grad-CAM Heatmap

Suspicious Region Overlay

Forensic Anomaly & Artifact Distribution Breakdown

Forensic Indicator	Score / Value	Benchmark / Anomaly Criteria
Boundary Artifact Discontinuity	76.8%	> 35% indicates blending seams
High-Frequency Texture Variance	13.0%	Disparity from natural sensor noise profile
Facial Bilateral Symmetry Coherence	51.7%	Structural landmark alignment discrepancy
Risk Index Classification	**CRITICAL**	Computed aggregate deepfake probability

Investigative Notes & Legal Advisory

This examination was performed using a calibrated deep convolutional neural network (ResNet-18 architecture) trained on manipulated facial sequences and validated against synthetic artifact distributions. The class activation maps highlight pixel regions contributing predominantly to the model classification. This certificate provides probabilistic evidentiary support for cyber-investigations and dispute resolution.

Status: Digitally Certified

Verification Stamp: AEGIS-LABS-OK
